LSI RISE Awards 2021 Submissions

What need did the calculator fill?

Why is it different/ special/ unique?

What challenges were faced and how were they overcome?

What did it achieve?

- Version 1 was created and launched during 2020 COVID lockdowns
- It merged existing calculators developed for students;
  - added layers of sophistication,
  - along with sufficient published and collated materials and product datasets
  - to prove and launch a first milestone calculator
- Version 2 includes Embodied Energy, Carbon & Life Cycle Assessment of new and existing building features
  - arrives nearly a year later
  - It is too early to claim any achievements
  - other than 3 awards that have been given to V1

What are the current and future benefits?

- Version 2 is too new to have a track record, but GBC will initiate user and steering groups where we will invite users to share data so that we can do annual reports on 'Carbon saved with the help of GBC'
- Version 2 is only the beginning of 31 versions already planned (See other slide)
- It is planned that all versions will continue to include interrelated calculations so instantaneous results can be read together and compared easily.

GBE Green Building Encyclopaedia
GBC Green Building Calculator

BIM is not popular yet

- Recent surveys show that BIM penetration into the design sector of the Construction industry is low
- If you do not do Government Work there is no need
- If you do not do big jobs there is no need
- If you have not experienced the benefits of BIM you have no incentive
- If you do not want to or cannot afford to run bigger computer systems to run BIM and open big files
- You will not get the benefit of BIM Apps
- You need alternative tools to do the same jobs

Counting Carbon

- ACAN, LETI and & RIBA campaigns
- Challenging Government to improve Building Regulations
- You may want to start interrogating building impacts, before you have to
- BRAD Z Counting carbon may arrive sooner than you think
- Get up to speed and land running

Why did I start making GBC?

- I want I want I want….. us all to do better, first time
  - Clients: to get what they asked for not what we gave them
  - Quality Surveyors: to do VE not Cost cutting, WLC not cheap
  - Manufacturers: to provide all important data, multi-functional products
  - Environmental Assessors: to guide designers with facts
  - Building Designers: to do more analysis themselves
  - Tenderers: to price a proper job and aim to claim no extras
  - BIM: Do what it claims to be possible in the advertising, economically
  - Advisory Bodies: To be able to give more robust guidance
- To have better information at hand when they make all specification decisions
  - Evidence Based Design
  - Competent as was intended

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Datasets>Equations>Calculators>Apps

- Data is okay, not much use on its own
  - Up to date and reliable data is essential
  - Consistently ordered data is very helpful
  - Datasets can be orderly, in one place, are better
  - Open datasets are best for interrogation by apps
  - Datasets do not tell the whole story
- Equations are essential
  - Equations can interrogate the datasets
- Calculators save time
  - Consistently competently join up equations and datasets together
  - Can be readymade and waiting to be used, speed up the process
  - Accommodate many choices and changes and bring instantaneous results
  - Interrogate many issues at the same time
  - Allow comparison of scenarios
  - Allow value engineering (in its original meaning) not just cost cutting
  - Could be educational, guiding, problem avoiding,
  - Could enable and empower individuals
- CAD BIM App Calculators
  - Save time populating the input cells of the calculator
  - Allow two way flow of information

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

I want clients

- with aspirations and objectives for a Healthy, Environmental, Useful building:
  - To know they can engage a building designer who has the tools and skills to meet their brief
  - To be able to invest well and get what they want;
    - not be driven down the business as usual cost cutting route
  - To know that their aspirations & objectives will survive all the way to completion on site

I want Quantity Surveyors to:

- Be Quality Surveyors not Quantity Surveys
- Create the 'Green Building Price Book'
  - Alistair McConnochie proposed 20 years ago
  - to become a reality, inside GBC
- Do Green Cost Planning
  - not win the 'race to the bottom'
- Do real Value Engineering
  - not cost-cutting disguised as Value Engineering;
  - but they never look at the bigger picture
- Do Whole Life Value without charging an extra fee
  - TOTEX = CAPEX + OPEX

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

I want manufacturers to:

- Make multi-functional materials, products and systems
  - to replace many singular function alternatives
  - that succeed in Value Engineering processes
    - Because they are difficult to substitute
- Make low impact materials and products
  - Not hide behind BRE GGtS Generic Materials Assessments
  - at industry sector level: aggregated average grey not green or violet

I want environmental and energy assessors to

- Be able to model buildings
  - With real products and their values
    - Not egneric materials and grey values
  - find their weaknesses and communicate
  - in terms that building designers cannot continue to ignore
- Interrogate at component level
  - not just at elemental or whole building level
- Interrogate bespoke assemblies
  - without having to refer back to control bodies
  - that take months to reply

I want building designers to be able to

- Do their own Cost Planning without a QS
  - based on the cost of doing it greener and better
  - not just cheapest wins every time
- Immediately understand the environmental impact
  - of their construction or refurbishment methods
  - Help make better informed choices of materials or products
  - Become carbon literate

I want building designers to be able to

- Compare alternative scenarios easily, quickly
  - to begin to build an understanding of the consequences of their choices
  - in time be able to intuitively choose lower impact materials and methods
- Intelligently interrogate the bill of materials
  - do environmental analysis on the fly.
- Access comprehensive generic materials and product datasets at their fingertips
  - adopt, apply and interrogate designs

I want building designers to be able to

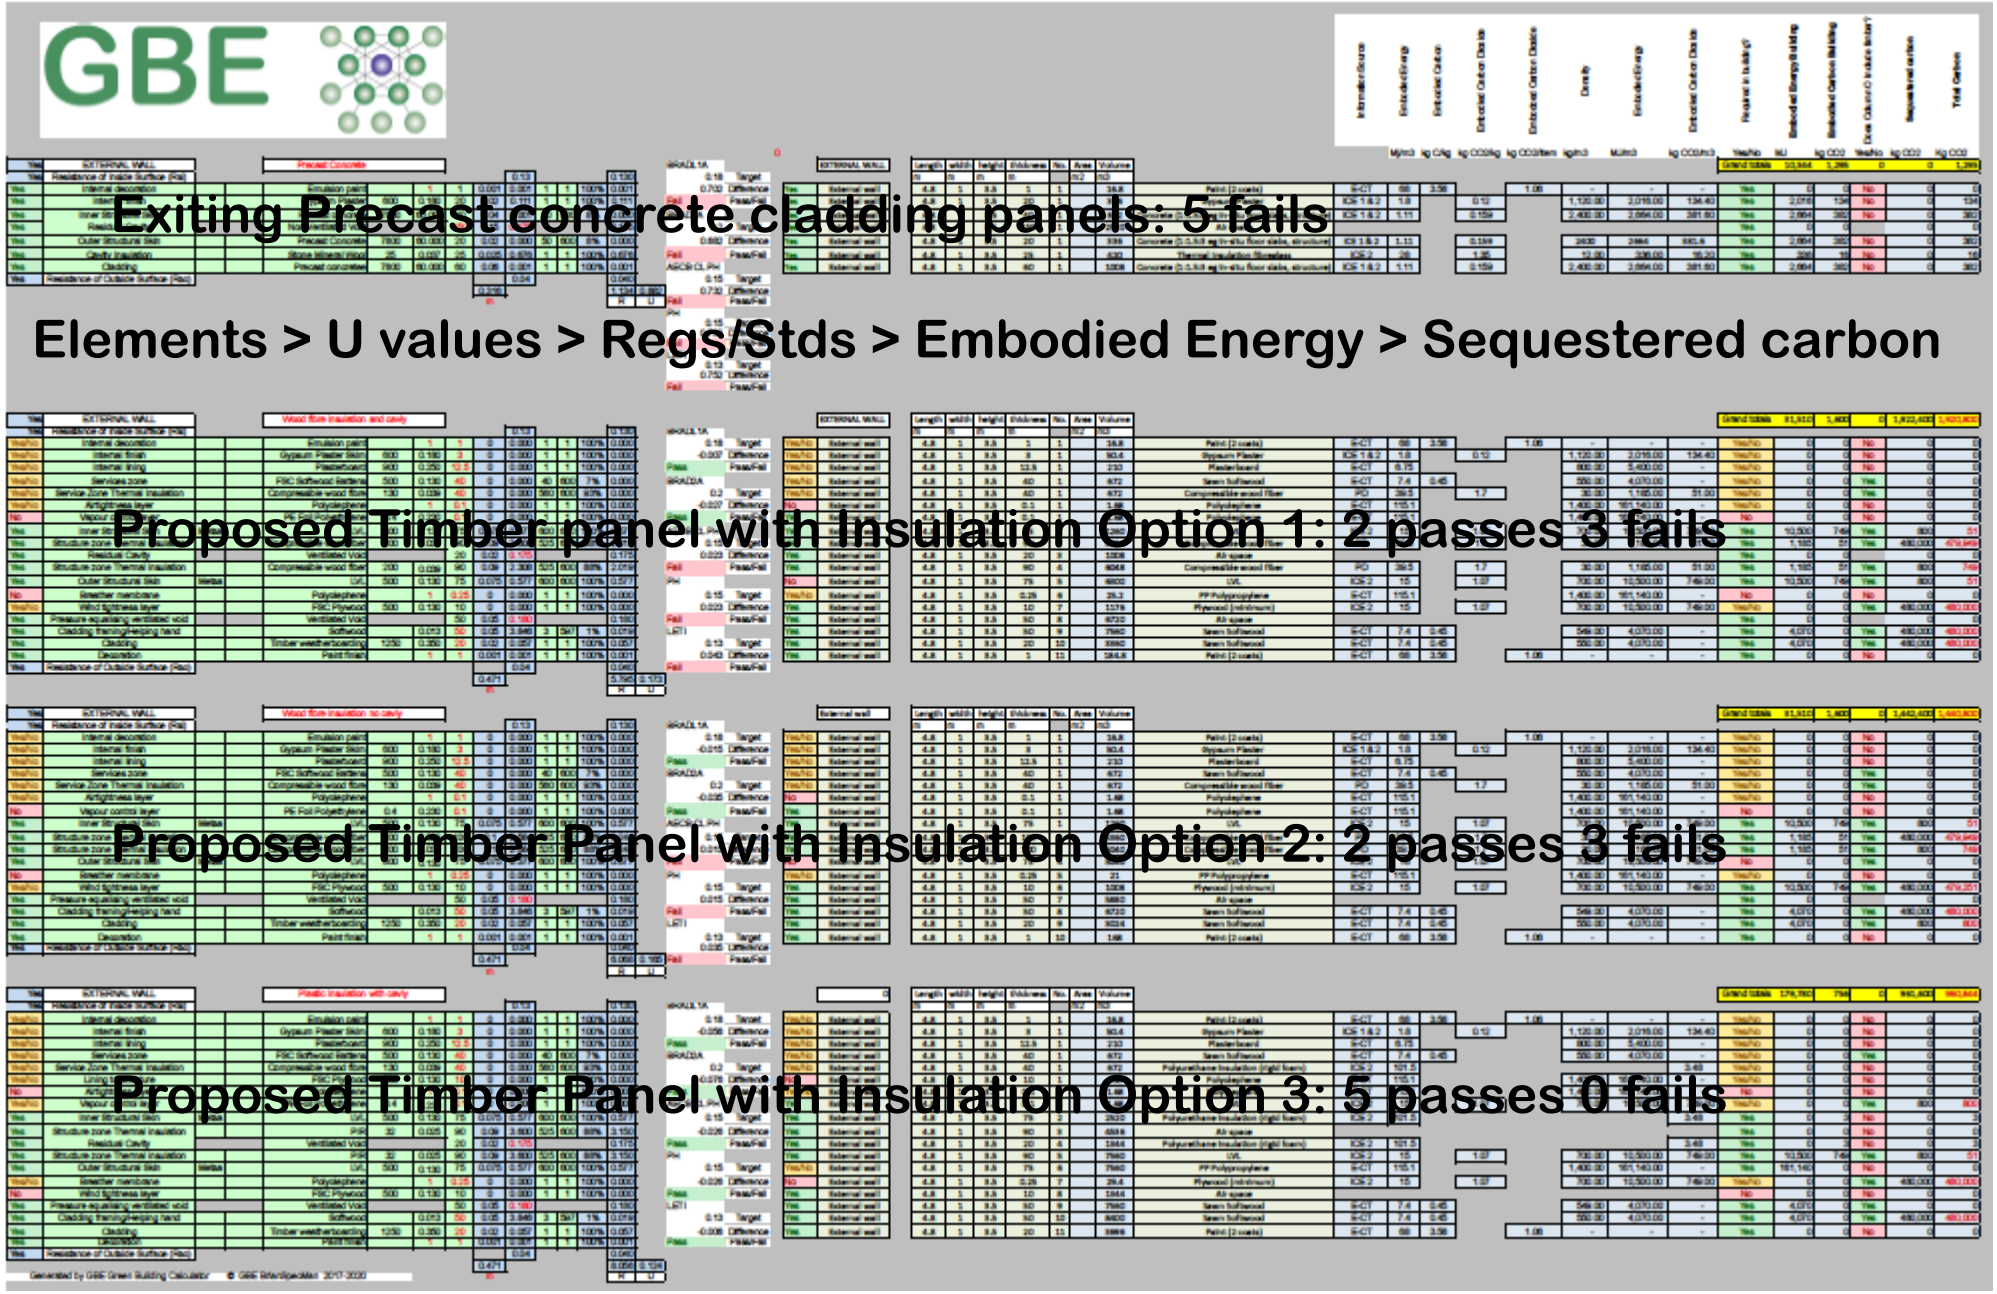
- Know where a product was invented to be used
  - not risk its inappropriate application
  - ‘Post-Grenfell function’ Version 3
- Close the performance gap:
  - Energy now,
  - Airtightness, later
  - Fire, acoustics, indoor air quality, etc. later
  - Services design, lighting design, later
- Have access to competent elemental assembly datasets
  - 892 already for Version 3
  - For use in the absence of know-how to assemble their own.
  - Choose from and adopt or adapt competently

I want building designers to be able to

- Have a low cost tool affordable by small practices
- Have a multi-functional tool that interrogates the same building model/dataset
  - That only has to be built once, to get many results
  - Unlike WRAP and BRE tools
- Submit to architectural competitions and awards
  - that insist on embodied energy, embodied carbon and sequestered carbon and energy and carbon in use,
  - as part of the criteria for success
  - with an appropriate weighting I hope.

Int. Timber Competition Entry

Int. Timber Competition Entry



GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

I want tenderers

- To be able to use the built-in calculator
  - as the Bill of Quantities Tender Document
- To not have to price the job with every intention of making claims
  - Especially on GMP domestic tenders
- To be able to price the job properly:
  - not chasing some false cost plan,
  - to allow trades people to have the time to care
  - and do a competent job using proper materials
- **I want Specification Substitution to be done:**
  - **with all the facts and figures available**
  - **about the consequence of every change,**
  - **other than just cost savings for the contractor**

LSI RISE Awards 2021

What need did the calculator fill?

- Elemental cost planning is not working,
  - leading the industry into financial melt down over the last decade;
  - effectively bankrupt but for supply chains suffering:
  - over 3 month late payments and consequential severe mental stress.
- GBC tries to take cost control out of the hands of cheap-focussed quantity surveyors and offer it to quality-focussed designers.
- Enables real big-thinking value engineering and avoids single component cost cutting
  - by showing the consequence of all specification substitution decisions,
  - so well informed decisions can be made.
- Enable architecture students, graduates and building design and maintenance practitioners:
  - to understand the costs, energy and other performance and environmental life cycle impacts of their building design.
- Take environmental design out of the hands of BREEAM Assessors
  - and enable carbon literacy within the design professions

Why is it different/ special/ unique?

- A design and decision tool
  - with embedded multi-functional interrelated calculators
  - for the significant numbers of designers that have not and are unlikely to engage with BIM.
- Engages with:
  - in use energy and carbon,
  - embodied energy, embodied and sequestered carbon in materials
  - full life cycle assessment
  - at component, element and whole building levels.
- Enables the user to choose between the plethora of Regulations, Design Standards and Campaigns,
  - set, monitor targets and be warned if they are not met,
  - instantly see thickness of different insulation materials needed.

What challenges were faced and how were they overcome?

- The time needed to compile all components and their areas in all elements and then find datasets,
  - will put most people off doing carbon accounting:
  - GBC has all readymade elements with all components ready to be populated by user to speed the process
- Keeping it simple:
  - using familiar MS Excel,
  - colour coded cells with different functions,
  - comprehensive instructions for all cells,
  - drop down lists to choose from,
  - materials and product datasets to populate cells
- Carbon counting cannot be ‘Top-Trumps’ in building design:
  - all other design issues have to be accounted for:
  - GBC is multifunctional and all calculators are interlinked so any change is recalculated throughout them instantaneously so informed decisions can be made.

What did it achieve?

- Version 1 was created and launched during 2020 COVID lockdowns
- It merged existing calculators developed for students;
  - added layers of sophistication,
  - along with sufficient published and collated materials and product datasets
  - to prove and launch a first milestone calculator
- Version 2 includes Embodied Energy, Carbon & Life Cycle Assessment of new and existing building features arrives nearly a year later.
  - It is too early to claim any achievements other than the 3 awards that have been given to V1 already.

What are the current and future benefits?

- Version 2 is too new to have a track record, but GBC will initiate user and steering groups where we will invite users to share data so that we can do annual reports on ‘Carbon saved with the help of GBC’
- Version 2 is only the beginning of 31 versions already planned (See other slide)
- It is planned that all versions will continue to include interrelated calculations so instantaneous results can be read together and compared easily.

V2-V33 Planned Development

Priorities to bring forward:

- V2 Retrofit, Terraces, Community level, MEP Services,
- V3 Decrement Delay, Form Factor refinements: dormers, bays, porches
- V4 Building Section Coding, Competent Application,
- 892 ready made elements, Bespoke Assemblies, Accessories, Specification Generator
- V5 Non-Domestic, Retrofit and Newbuild more refinement
- V6 Embodied Energy, Carbon and Sequestered carbon; Non-external envelope elements
- V7 Condensation Check, Thermal Bridge, Secondary Element Calculator, Thermal mass calculator
- V8 LCA Calculator
- V9 Landscape
- V10 Civils and Infrastructure: scope Increased
- V11 Waste Calculator using WasteCost®Lite
- V12 Plastic free v Recycled Plastic
- V13 Interiors: Scope increased, Ska fit-out. refit
- V14 Circular economy: Reclaim Reuse
- V15 Self-build Interface
- V16 CAD BIM App
- V17 Whole Project Budget Calculations, full Fee bid calculation based on cost plan
- V18 EU and International versions
- V19 Services Design Module: Occupancy level, Energy Sources and uses,
- V20 Lighting Design Module: Health & Wellbeing, Light Nutrition
- V21 Biodiversity Inclusion, Biodiversity Net Gain
- V22 Local Climate Appropriate construction and materials
- V23 Vernacular, local: materials, trades, economy
- V24 GBPB Green Building Price Book
- V25 O&MM Operation & Maintenance Manuals
- V26 FM Specification
- V27 Local Procurement, Transport to site, distance search facility
- V28 On Site Construction Emissions
- V29 Design Life, Durability and Competent Products
- V30 Air tightness & Energy Loss
- V31 Value Engineering Opportunities: in not out
- V32 Healthy Building
- V33 Screening Priorities

Historic Fabric Upgrades

- Compare upgrade measures: what do we really want to know?
  - e.g. single > double or triple glazed windows
  - Glass, spacers, gasses, LowE/SC coatings, frame profile, frame materials, weight, trickle vents
  - Embodied
    - Embodied Energy
    - Embodied Carbon
    - Sequestered Carbon
  - In-use
    - Energy savings: before and after
    - Carbon savings: before and after
  - Costs
    - Of upgrade measure
    - In-use energy cost saving: before and after
    - Financial comparison period? = life expectancy of measures
      - Temporary, Short, Normal and Long term
  - Value for money
    - Cost pay-back periods, profiteering at expense of performance or comfort
  - Value Engineering not just cost cutting
    - Carbon-back periods
  - But don't forget the other properties features, benefits, considerations
    - Thermal comfort (PH & EnerPHit), less condensation, vapour open/closed
    - Plastic content, plastic avoidance, recycled content, fire life risk
    - High recycled content may lead to bad choice of materials and properties

Window frame, Glass, Coating, Perimeter, Spacer, Gas, Finishes, Specifications Guesswork gut instinct Turn +, - & ? to numbers Evidence based design & specification	Existing Single glazing	Existing to Double glazing	+Secondary Glazing	+Secondary Double Glazing	Replace with double glazing	Replace with triple glazing

V1 User Survey

User Survey

Please email the survey as a PDF or excel to BrianSpecMan@icloud.com

GBE thinks it knows what is needed and the right order for its development
Some tasks are dependent on others being in place first to build upon
GBE would like to know from users if they would like to see some parts developed sooner
GBE would like to know from users if they would like to see other parts added to the tasks
Please rearrange the numbers in columns E & F into your preferred order and add any comments or requests in column G
Please complete 'Your Requests' below

			Please arrange the numbers in your preferred order		
			Preferred Version Order	Preferred sub-item order	Comment
About	A description of what GBE Green Building Calculator is, how it started and how it has developed	Launch Version 1.1	1	1	
Features Benefits	What is does and how that helps users	Launch Version 1.2		2	
Development	Aid memoir for development	Launch Version 1.3		3	
Phased Development Prices	This page: What is included in the launch version of GBE Green Building Calculator and GBE's suggested development order: Subject to user survey	Launch Version 1.4		4	
Instructions	Read these if GBE Green Building Calculator is not intuitive (it probably won't be if you have not done a U value calculation before)	Launch Version 1.5		5	
Revisions	A record of updates to GBE Green Building Calculator to enable an audit trail through the development process	Launch Version 1.6		6	
Project Revisions	Not part of GBE Green Building Calculator For users record keeping on design projects	Launch Version 1.7		7	
Whole Building	Whole Building: The start of GBE Green Building Calculator Input page: Sizes, Areas and Volumes, hours of operation, design temperatures, inside and out	Launch Version 1.8		8	
Schedule of Accommodation	Schedule of Accommodation Room by Rooms Input page: more specific than whole building if required; Areas and volumes, hours of operation, design temperatures, inside and out	Launch Version 1.9		9	
Room By Room Heat Losses	Input and Put-put page: Room by room heat loss calculator to determine Boiler size, radiator or under floor heating requirements, Developed to help designer to make the insulation thicknesses or window specifications to match a boiler capacity when it's a tight fit	Launch Version 1.10		10	
Form Factor	Results page: Analysis of Form Factor and optimal U values to respond to them To help designers see the importance of compactness, or the consequence of fragmentation of the building volume, on the energy consumption See Update 2.3	Launch Version 1.11		11	
Building Elements	Input page: simple yes/no Building Elements and secondary-elements are selected from readymade lists of 29 Elements and 12 Secondary Elements to match the scope of the project	Launch Version 1.12		12	
Building Element Areas	Input and output page: Building Elements and secondary-elements: their dimensions are added by user and their areas are automatically calculated.	Launch Version 1.13		13	
Multiple Size Building Element Areas	Input and output page: Since windows and doors come in a multitude of sized then a GBE Green Building Calculator schedules allows you to incorporate them all	Launch Version 1.14		14	
U values Etc. Energy Targets	Results page: Allows the users to compare and choose between Building Regulations Part L, other national regulations or standards, LETI, AECB CarbonLite, Passivhaus, EnerPHit, EAMs, etc. including: U values, Airtightness, Form factors, Elevational window %.	Launch Version 1.15		15	
Insulation Thicknesses	Input and output table: Information Resource: Quick look up table Users apply the chosen U value targets from the previous worksheet GBE Green Building Calculator automatically displays the thickness of different k valued insulation materials needed to meet U values targeted in each element.	Launch Version 1.16		16	
Decrement Delay Insulation Thickness	Input and output page: (incomplete at launch) Automatically see what thickness of different k valued insulation materials is needed to avoid overheating on summer See Update 2.1	Launch Version 1.17 Version 3.1		3.1	
Legend	Information Resource: A list of terms used in GBE Green Building Calculator with some explanation of their meaning in a tabulated format Potential link to GBE Jargon Buster pages	Launch Version 1.18		18	
Elements	Input and output page: Yes/No then choose from drop down menu, followed by automatic cell population Allows the user to populate and assemble elements by choosing their combination of functional components and then choosing the materials for each component. Components are in the right sequence but it may needs some know-how to choose the right one (Update 3 will help with readymade assemblies) Costs of insulation and windows are added here to help persuade architects and clients to spend money on insulation and higher performance windows and glazing.	Launch Version 1.19		19	
Bill of Materials Quantities Costs	Input and output page: Allows user to cost plan their Building with a Bill of materials, quantities, labour and costs based on building fabric only so far. It will be reliant upon users interrogating recent tender rates or building price books Services are planned to be addressed in update 1.4-1.7 (unless users say otherwise) Non-external envelope components are planned to be developed in Phase 5.4 (unless users want it sooner) See Update 1.2 & 1.3	Launch Version 1.20		20

Welcome

Hello and welcome to GBE Green Building Encyclopaedia's GBC Green Building Calculator

Brian Murphy aka BrianSpecMan is an Architectural Technician and Architect by training, a Specification writer by choice, an Environmentalist by action, an Educator by calling a Content Author and website Editor by necessity, a number cruncher out of urgency, and a Tour Guide for fun

BrianSpecMan has been working in the UK Construction industry for over 45 years.

I want, I want, I want

BrianSpecMan has for a long time wanted more joined up policy and targets, joined up regulations, joined up design thinking but its all a long time coming.

BrianSpecMan wants more joined up tools to help in the design processes.
Modelling has the potential to do this for Conputer Aided Design but we need more tools to do the same for BInformationM and one day join them all up.

BrianSpecMan keeps observing battens being dropped, inefficiencies and redundancy in the way this industry works and sees the consequences in the buildings we create, confirmed by Zero Carbon Hub's Performance gap.

If we are to survive the Climate & Biodiversity Emergencies we need to get better than this.

After Grenfell it is obvious we need better methods of working and more checks and balances in all decision making.

BrianSpecMan has developed Green Building Calculator In order to fill one gap in the information chain.

BrianSpecMan wants Architects to be able to do their own Energy and Environmental Modelling and Cost Planning, all in a single tool that gives instant feedback to changes in specification.

About GBC

Topic:	Information	
Brand Name:	GBC Green Building Calculator 'GBE GBC'	
Working File Name:	GBC Green Building Calculator Working.xlsx	
Issue File name:	GBC Green Building Calculator A14BRM110620.xlsx	
Publishing Issue File Name:	GBC Green Building Calculator V100.xlsx	
WordPress import and export file name	GBC Green Building Calculator V100-bapiwy.xlsx	
GBC Create date:	13/01/2018 (previous calculators from 2011 stated to be merged into this file)	
GBC V2 Last edited date:	29/05/2021	
When opening file	Links to other file: press 'ignore' button	Yes
When opening file	Excel cannot calculate a formulae: Press 'Cancel' button	Yes
When opening file	Correct circular calculation: Press ' ' burron	Yes
When downloaded to your C drive or servers	Feel free to delete "-bapiwy" from file name or rename the file to suit your filing naming system	Yes
Make the file a Template	To preserve the file as created by GBC, make this file a template available to Excel. File > Save As > Format: Drop down list > Choose > Excel Template (.xltx) or (.xlt) > Where: Excel automatically chooses 'My Templates' Folder > File Name: Partially rename 'Working' to 'Template' > Save	Yes
Using Template in Excel	File > New from template > Scroll to find the GBC V2 template file > Click it > Press 'Choose' button > start working	Yes
Purpose:	To provide a low cost Energy Performance, Environmental Impact and Cost analysis tool for design of new buildings or refurbishments, for those not engaging in PHPP, SAP, SBEM, IES, etc. calculations.	
History:	This MS Excel calculator was originally developed as two files to permit Post Graduate Architecture students to analyse their own studio building projects during a parallel technology module EREID Energy And Resource Efficiency in Design at London South Bank University 2014-2018. Due to the high risk of inability by the 5th year students, potential differing approaches and inconsistency of results, GBE's BrianSpecMan created two spreadsheet's, developing their worksheets week by week as the students progressed through the module under weekly time pressures. The consistent results meant we could compare different building shapes, methods of construction, materials choices and resultant energy demand and consumption.

V2 Instructions

Instructions

Legend

Green cells need the user to add, project specific information or replace default information with specific information
Red text in Turquois cells is reproducing building-wide information but the user can over write it with room or element specific values
Blue cells provide results based on a calculation using data from other cells DO NOT OVERWRITE THE CELL CONTENT
Red cells indicate a drop down list is available to choose from options

File: Spreadsheet

- Using your dimensioned drawings
- Using the latest edition of file GBE Green Building Calculator B01BRM080620.xlsx (if you need *.xls let me know I will provide)
- Found in GBE Shop https://greenbuildingencyclopaedia.uk/product-category/gbe-calculators-shop/
- Found in Green Building Calculator website https://greenbuildingcalculator.uk/buy-now/
- Download the file to your C Drive (or other, on the server, ask your IT department)
- Save the file as a Microsoft Excel Template file (Save As > *.XLTX) in the Template folder (automatically offered if set up corrrectly)
- Make a working copy (File > New from Template > Scroll > Choose > File > Save as > name file) add your project reference or name to the file name
- Edit your working file in your C drive (or other on your server, dictated by you're IT department)

Worksheet	Column(s)	Row(s)	Cells	Worksheet Instructions: Whole Building
Schedule Accommodation		Custom View:	Whole Building (B3:P21)	• Work sheet (tab) ScheduleAccommodation
	C	3	C3	• Add your name (this feeds through to numerous worksheets)
	C	4	C4	• Add your project name or reference
	C	5	C5	• Add your project address
	C	6	C6	• Add your building User Activity or Purpose
	M to O	3 to 5	M3:O5	• Observe the diagram used to complete Room by Room schedule, below right
	D, E, F, G, I	11	D11, E11, F11, G11, I11	• Add your project details: Quantities, dimensions.
	L	11	L11	• Confirm these match your plans using the drop down list
	N	11	N11	• Confirm or change the number of hours of operation of the whole building (during which internal temperatures are to be maintained, this can be made room by room later below)
	D, E, F, G	14	D14, E14, F14, G14	• Add your project details: Quantities, dimensions.
	H	14	H14	• Confirm one house position in terrace using the drop down list (or not applicable if whole terrace)
	L	14	L14	• Confirm these match your plans using the drop down list
	O	11	O11	• Confirm or change the internal temperature to be maintained in the whole building (this can be changed to room by room later below)
	O	12	Not yet developed	• Choose Summer or Winter issues using the drop down list
	O	15, 17 to 19, 21	O15, O17, O18, O19, O21	• Confirm or change the other temperatures to be maintained in specific locations
	O	16	O16	• Confirm subsoil temperature (below 1 m in the UK this 10-12 all year round) change for other parts of globe
	O	20	O20	• Confirm or change externall temperature Metrological Office data lor location (winter average) change for other parts of globe
				Save your work

Worksheet Instructions: Terraces

Schedule Accommodation		Custom View:	Terraces (B12:O14)	• Work sheet (tab) ScheduleAccommodation
	D, E, F, G	14	D14, E14, F14, G14	• Add your project details: Quantities, dimensions.
	H	14	H14	• Use the drop down list to select mid terrace or end of terrace or if whole terrraces then N/A
	L	14	L14	• Confirm these match your plans using the drop down list

Worksheet Instructions: Schedule of Accommodation

Schedule Accommodation		Custom View:	Schedule Accommodation	• Work sheet (tab) ScheduleAccommodation
	A	27, 37, 47, 57	A27, A37, A47, A57	• Choose Yes or No according to your project using the drop down list
	C	27-35, 37-45, 47-55, 58-65		• Rename the green cells to correspond to the rooms, areas and circulation spaces in your client brief or design aspiration for your building and any others that are different in your building
	C	27-35, 37-45, 47-55, 58-66		• Add more rows as necessary for your building, add new blank rows mid way in each of the floor groups and copy the content of an existing row into your new rows
	D & E	27-35, 37-45, 47-55, 58-67		• Pre-populated from Whole Building figure but can be changed here for each room
	D	27-35, 37-45, 47-55, 58-68		• NB: if you have similar rooms in a row that are not square nor parallel sides use the average of the largest and smallest sizes and add the quantity or rooms to column D
	F & G	27-35, 37-45, 47-55, 58-69		• Add the dimensions for each of your rooms

GBC Green Building Calculator

Version Development

This Design & Decision tool is created as a standalone MSExcel file, and will continue to be developed after development of any BIM App

Worksheet	Custom view	Scope of phased development	Versions
Welcome		Introduction, links to website content, Awards	Launch Version 1.0
About		A description of what GBE Green Building Calculator is, how it started and how it has developed	Launch Version 1.1
Features Benefits		What is does and how that helps users	Launch Version 1.2
Development		Aid memoir for development	Launch Version 1.3
Version Development Prices		This page: What is included in the launch version of GBE Green Building Calculator and GBE's suggested development order: Subject to user survey	Launch Version 1.4
Instructions		Read these if GBE Green Building Calculator is not intuitive (it probably won't be if you have not done a U value calculation before)	Launch Version 1.5
Revisions		A record of updates to GBE Green Building Calculator to enable a partial audit trail through the development process	Launch Version 1.6
Project Revisions		Not part of GBE Green Building Calculator For users record keeping on design projects	Launch Version 1.7
Schedule of Accommodation	Whole Building	Whole Building: The start of GBE Green Building Calculator Input page: Sizes, Areas and Volumes, hours of operation, design temperatures, inside and out	Launch Version 1.8
Schedule of Accommodation	Schedule of Accommodation	Schedule of Accommodation Room by Rooms Input page: more specific than whole building if required; Areas and volumes, hours of operation, design temperatures, inside and out	Launch Version 1.9
Schedule of Accommodation	Room By Room Heat Losses	Input and output page: Room by room heat loss calculator to determine Boiler size, radiator or under floor heating requirements, Developed to help designer to make the insulation thicknesses or window specifications to match a boiler capacity when it's a tight fit	Launch Version 1.10
Form Factor		Results page: Analysis of Form Factor and optimal U values to respond to them To help designers see the importance of compactness, or the consequence of fragmentation of the building volume, on the energy consumption See Update 2.3	Launch Version 1.11
Building Elements		Input page: simple yes/no Building Elements and secondary-elements are selected from readymade lists of 29 Elements and 12 Secondary Elements to match the scope of the project	Launch Version 1.12
Building Element Areas		Input and output page: Building Elements and secondary-elements: their dimensions are added by user and their areas or volumes are automatically calculated.	Launch Version 1.13
Building Element Areas	Multiple Size Building Element Areas	Input and output page: Since windows and doors come in a multitude of sized then a GBE Green Building Calculator schedules allows you to incorporate them all. Other elements may also have the same issues these have been allowed for and the schedule developed.	Launch Version 1.14
U values Etc. Energy Targets		Results page: Allows the users to compare and choose between Building Regulations Part L, other national regulations or standards, LETI, AECB CarbonLite, Passivhaus, EnerPHit, EAMs, etc. including: U values, Airtightness, Form factors, Elevational window %.	Launch Version 1.15
Insulation Thicknesses	Insulation Thicknesses	Input and output table: Information Resource: Quick look up table Users apply the chosen U value targets from the previous worksheet GBE Green Building Calculator automatically displays the thickness of different k valued insulation materials needed to meet U values targeted in each element.	Launch Version 1.16
Insulation Thicknesses	Decrement Delay Insulation Thickness	Input and output page: (incomplete at launch) Automatically see what thickness of different k valued insulation materials is needed to avoid overheating on summer See Update 2.1	Launch Version 1.17 Was Version 3.1
Legend		Information Resource: A list of terms used in GBE Green Building Calculator with some explanation of their meaning in a tabulated format Potential link to GBE Jargon Buster pages	Launch Version 1.18
Elements		Input and output page: Yes/No then choose from drop down menu, followed by automatic cell population Allows the user to populate and assemble elements by choosing their combination of functional components and then choosing the materials for each component. Components are in the right sequence but it may needs some know-how to choose the right one (Update 3 will help with readymade assemblies) Costs of insulation and windows are added here to help persuade architects and clients to spend money on insulation and higher performance windows and glazing.	Launch Version 1.19
Bill of Materials Quantities Costs		Input and output page: Allows user to cost plan their Building with a Bill of materials, quantities, labour and costs based on building fabric only so far. It will be reliant upon users interrogating recent tender rates or building price books Services are planned to be addressed in update 1.4-1.7 (unless users say otherwise)

V1 Whole Building

- Users add for the whole building:
  - Sizes
  - Number of floors
  - Hours of operation
  - Design temperatures, inside, out, ground
- GBC works out areas and volumes,

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

V2 Development

- Terraces:
  - Community sized projects
  - Energy Company Obligations (ECO)
  - GreenDeal replacement?
- Position in terrace or one house
  - Number of party walls and end walls
- Singular v Multiple sizes
- Glazing Elemental v Components
- Bill of Materials v Elemental Pricing

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

V1 Form Factor:

- A quick analysis of the building form factor
- Is it terrace or multi-storey
- Is it cubic, linear, lumpy or has wings,
- Sets target U values
- Which go beyond regulations
  - For a low energy consumption building
  - Or worse in a block or terrace (ignore!)

V2 Form Factor

- Passivhaus design principles:
  - Heat Loss Form Factor (HLF)
  - Correlation between form factor and insulation thicknesses,
  - Mineral wool example
  - Choose material to see its required thicknesses
- Roof geometry: Flat, Pitched, Domed, etc.
- Projections: To refine FF for dormers, bay windows, oriel windows, porches, conservatories, colonnades, etc.

V1 U Values Etc.:

- Comparisons between:
  - National Building Regulations (E, W, S, NI and other countries),
  - Energy Designer Standards, FEES, AECB CarbonLite, CLR, Passivhaus, EnerPHit, EAMs, etc.
- Including:
  - U values, Airtightness, Form factors, Primary Energy, Window %, Window orientation etc.
- Allowing users to choose and apply chosen set of targets to projects.

V1 Energy and related design standards

- Building Regulations Approved Document L
  - Will eventually meet carbon targets but not now
  - Most new buildings will need to be retrofit by 2030-2050
- Energy Design Standards
  - (improving on Building Regulations)
  - AECB Bronze, Silver, Gold and Platinum Standard
  - Passivhaus (German) PHPP Software
    - Indoor Air Quality and Thermal Comfort conditions driven
    - Minimise air leakage, minimise thermal bridges
    - EnerPHit (Passivhaus Retrofit)
  - Carbon Lite (UK AECB)
    - Passivhaus interpretation for UK climate and energy mix
    - Carbon Lite Retrofit (CLR)
  - Minergie (Swiss)
  - Super E (Canadian; means to sell their softwood)

V1 Elements: Assemblies of Components & U or R value

- Detailed descriptions of 24 of 39 potential elements and 12 secondary-elements making up the external envelop of a building
- Allows the user to choose elements and assemble them by choosing their combination of functional components and then choosing the materials for each component.
- Where possible a default size is added
- Where necessary the user adds insulation and other component thicknesses.
- Using each materials k values and set resistances it calculates all of the R and U values automatically

SFCA 4th Edition

Detailed (Elemental) Cost Analysis

Elements (and otional Components)	Area or Quantity?	Cost per m2 GIFA (Gross Internal Floor Area)	Total Area	Unit Quantity	Unit rate (Cost per No.)	Total Cost
	Drop Down List	£/m2	m2	No.	£/No.	£
1 Substructure	m2	£45.00	60	1	£1.00	£2,700.00

Future Development
Bill of Materials (BoM)

- Being added:
  - Non-envelope items,
  - Services
- National Building Price book datasets? SPON
  - But they are part of BAU
  - ‘race to the bottom’

V20 Future Development

- Green Building Price Book
  - Proposed 18 years ago
  - But proposal rejected by publishers
  - Discussions started
- Embedded in GBC V20
- Products and Materials sheets
  - Add costs
  - Add rates

V2 Embodied Energy & Carbon Sequestered Carbon

- Drop Down Lists
  - Choose Function
  - Application Location
  - Material Choice
  - Choose and auto-populates cells
  - Auto-calculates Energy and Carbon
- Made of Timber? Yes/No
  - Auto calculates Sequestered Carbon

V2 > V3 Products

- Becomes a Look Up Table to populate 'Elements: Components’
- GBC to only permit them to be chosen as intended by manufacturer
- V1 Users can still overwrite
  - but consciously breaking rules
  - At their own risk
- V3 GBC shall prevent it (Protect GBC)
- V20 Green Building Price Book

V1 Secondary Elements: Windows doors rooflights

- Is an information resource
- for secondary elements
- their properties for use in Components of 'Elements'
- The user can obtain their own or copy information manually
- Windows and Glazing options
- Pick and choose

V2 Secondary Elements

- Look up table to automatically populate Component of 'Elements'
- Secondary Element calculator (started)
  - Ug, Uf, Uw, Psi glazing bar, Psi perimeter

V1 Element Summary:

- Summarises 24 Elements and 12 Secondary Elements
  - Calculated U values,
  - Compares with target U values,
  - highlighting any shortfalls

V2 Element Summary

- 39 external envelop elements
- Other parts to be added Porch, Sun space, Extension, Dormer
- V2 Non U value elements:
  - Not for U value calculations
  - But for EE, EC, SC, LCA calculations

V2 Element Summary Ext Env For U Value Calculations

	Element Summary: External Envelope	Calculated Total U value	Target Elemental U value	Difference	Pass, PassU or Fail	Form Factor target U value	Difference	Pass, PassU or Fail	Embodied Energy	Traget Embodied Energy	Difference	Pass, PassU or Fail	Embodied Carbon	Sequestered carbon	Total Carbon	Target Carbon	Difference	Pass, PassU or Fail

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

V1 Uvalue > Watts > CO2 in use:

- Assembles elemental areas and U values to calculates energy losses from
  - each element in groups
  - total secondary elements
  - total losses
  - each element group losses as a % of the whole
- comparisons can be made by the user
  - gives a chance to reconsider earlier decisions
- Particularly useful is the comparison of basement, walls, roofs, floors and all glazing
- Choose fuel source to get CO2 readout

U Value To Watts To CO2

V2 FuelCarbonFactor:

- Current data ^ RE %
  - Information resource
  - Used as a ‘look up table’
  - used by 'UToWattsToCO2’
  - Calculates: Carbon In Use
- Add Current Fuel costs
  - Choosing fuel also applies costs
  - Calculates: Energy in Use costs

V2 Fuel carbon factor 2020

- Data from Defra or other sources
  - GBC updated
- Can add national datasets to choose from
- V14 International Versions to develop
  - USA already asking
    - looking for development partner
  - Latest data:
    - EU wide 2020 CO2 in mains supply incl. electricity
    - EU partners interested

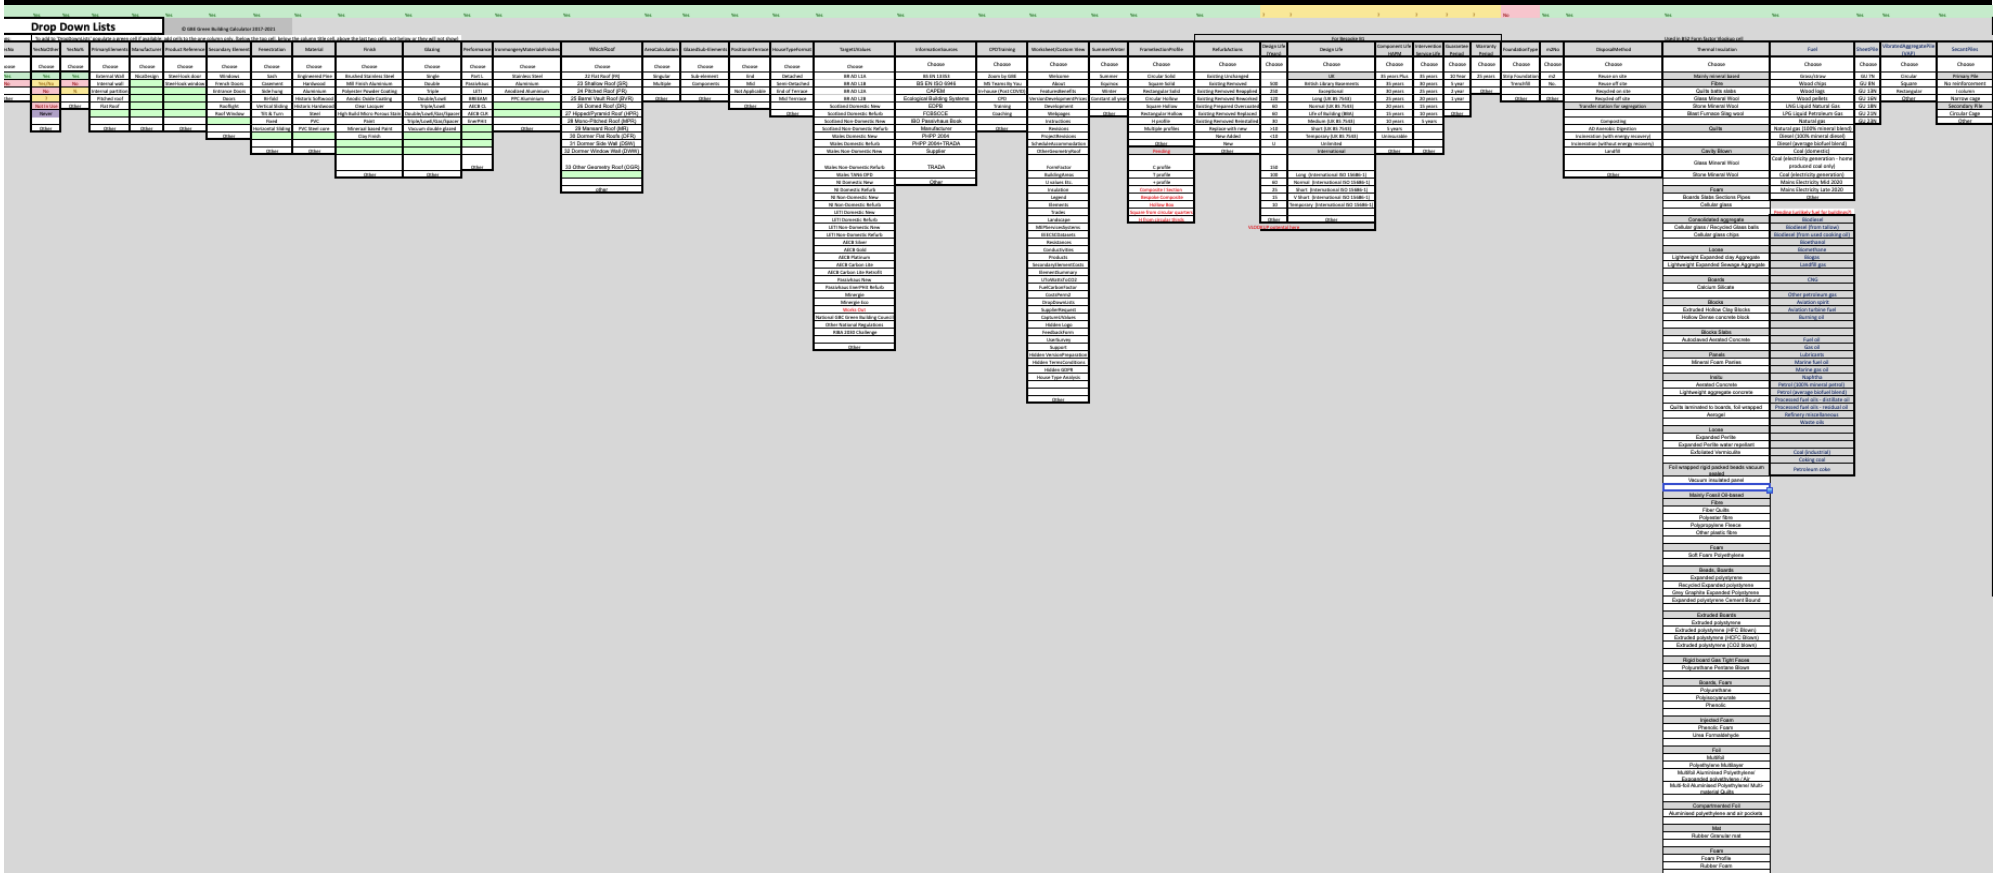
V1 Drop Down List:

- Not part of the calculator
- Used with look up tables to populate cells from readymade datasets
  - To avoid retyping
  - To avoid spelling error
  - To limit choices
- Lists can be added to by user, as long as the last two cells remain at bottom of sets

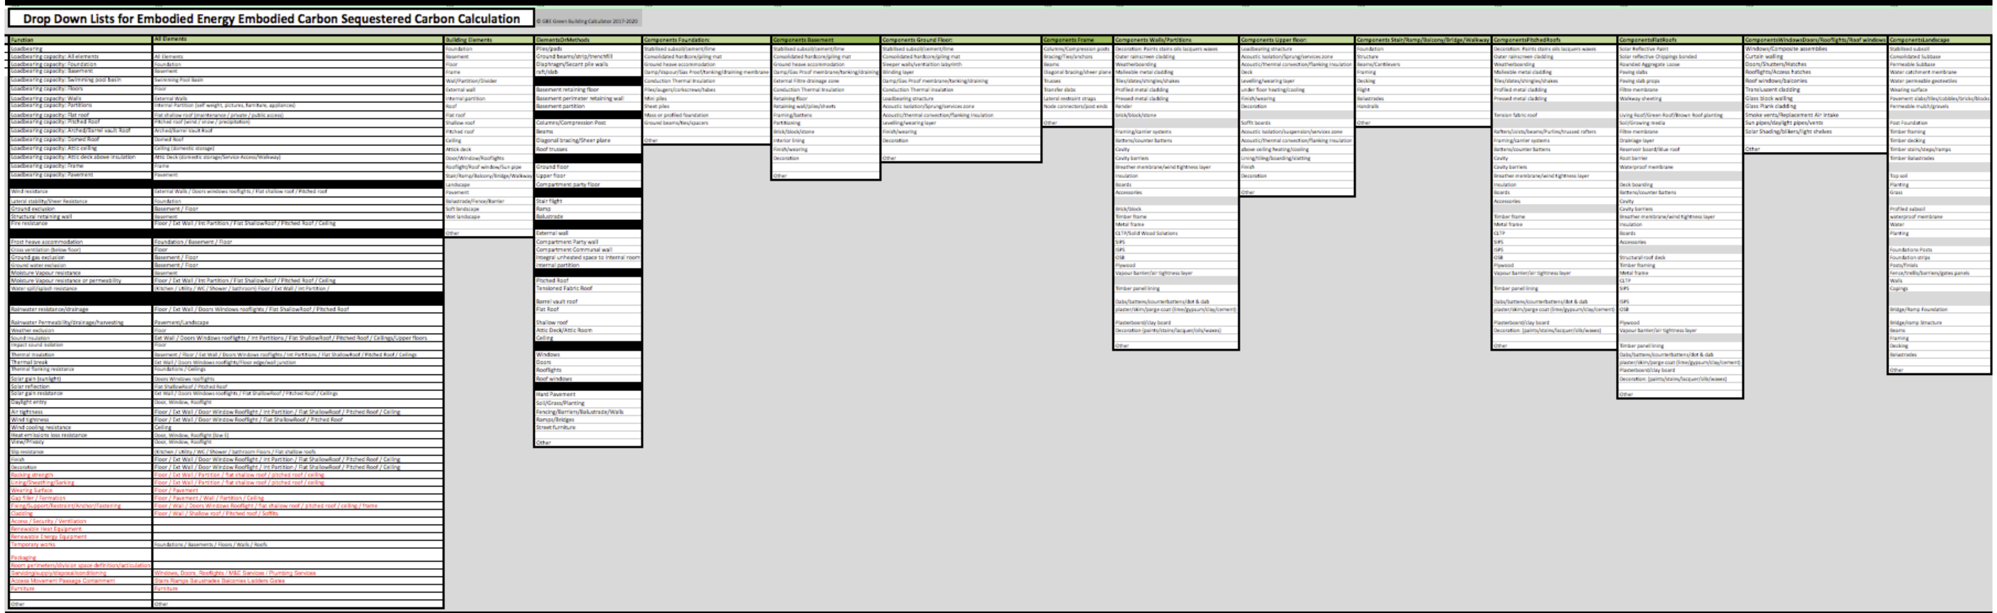
V2 V3 Drop Down Lists

- To ensure products are used in correct applications
  - Manufacturer's recommendation
  - Part of datasets
  - Used intelligently by spreadsheet
- These lists will expand exponentially

V2 Drop Down Lists: Core



V2 Drop Down Lists: EE EC SC



Drop Down Lists for Embodied Energy Embodied Carbon Sequestered Carbon Calculation

Drop Down List Manufacturer Supplier Request (MSR) and Elements: EE EC SC

12 Services Riser Upper Floor (SRUF)	Stabilised subsoil/cement/lime	Fixing	Boards Insulation	Air space (heat flow downwards) 50 mm	PVC frame 1200 x 1200 2x glazed, krypton filled (maximum)
13 External Floor & Soffit (EFS) (over air)	Consolidated hardcore/piling mat	Fixing/Support/Restraint/Anchor/Fastening	Brick Wall	Air space (heat flow downwards) 7 mm	PVC frame 1200 x 1200 2x glazed, krypton filled (minimum)
14 Top Floor (TF)	Ground heave accommodation	Frost heave accommodation	Brick/Block	Air space (heat flow horizontal) 10 mm	PVC frame 1200 x 1200 2x glazed, xeon filled (maximum)
Compartmentation (C)	Damp/Gas Proof membrane/tanking/draining	Furniture	Cast insitu	Air space (heat flow horizontal) 100 mm	PVC frame 1200 x 1200 2x glazed, xeon filled (minimum)
15 Party Floor (PF)	External Filtre drainage zone	Gap Filler	Coating	Air space (heat flow horizontal) 15 mm	Timber frame 1200 x 1200 2x glazed, air or argon filled (maximum)
16 Party Wall (PW)	Conduction Thermal Insulation	Gap filler / Formation	Compartmented Foil	Air space (heat flow horizontal) 25 mm	Timber frame 1200 x 1200 2x glazed, air or argon filled (minimum)
17 Communal Compartment Floors (CCF)	Retaining floor	Gap Formation	Consolidated aggregate	Air space (heat flow horizontal) 300 mm	Timber frame 1200 x 1200 2x glazed, krypton filled (maximum)
18 Communal Compartment Wall (CCW)	Retaining wall/piles/sheets	Ground exclusion	Consolidated layer	Air space (heat flow horizontal) 5 mm	Timber frame 1200 x 1200 2x glazed, krypton filled (minimum)
19 Riser Compartment Upper Floor (RCUF)	Framing/battens	Ground gas exclusion	Cords	Air space (heat flow horizontal) 50 mm	Timber frame 1200 x 1200 2x glazed, xeon filled (maximum)
Walls (W)	Partitioning	Ground water exclusion	Expanded spheres		Timber frame 1200 x 1200 2x glazed, xeon filled (minimum)
20 External Walls (EW)	Brick/block/stone	Heat emissions loss resistance	External render	Air space (heat flow horizontal) 7 mm	Timber frame 2x glazed, argon filled, window
21 Integral Unheated Space Wall (IUSW)	Interior lining	Impact sound isolation	Extruded Cellular Block	Air space (heat flow upwards) 10 mm	Timber frame 2x glazed, argon filled, window
Roofs (R)	Finish/wearing	Lateral stability	Fibre Quilts	Air space (heat flow upwards) 100 mm	
22 Flat Roof (FR)	Decoration	Lateral stability/Sheer Resistance	Flake	Air space (heat flow upwards) 15 mm	Other
23 Shallow Roof (SR)		Lining	Flat filled metal panel	Air space (heat flow upwards) 25 mm	
24 Pitched Roof (PR)	**Components Ground Floor:**	Lining/Sheathing/Sarking	Flexible Matts	Air space (heat flow upwards) 300 mm	
25 Barrel Vault Roof (BVR)	Stabilised subsoil/cement/lime	Loadbearing capacity: All elements	Flexible membrane	Air space (heat flow upwards) 5 mm	
26 Domed Roof (DR)	Consolidated hardcore/piling mat	Loadbearing capacity: Arched/Barrel vault Roof	Flexible Sheet	Air space (heat flow upwards) 50 mm	
27 Hipped/Pyramid Roof (HPR)	Sleeper walls/ventialtion labyrinth	Loadbearing capacity: Attic ceiling	Flooring	Air space (heat flow upwards) 7 mm	
28 Mono-Pitched Roof (MPR)	Blinding layer	Loadbearing capacity: Attic deck above insulation	Foam Profile	Aluminised polyethylene and air pockets	
29 Mansard Roof (MR)	Damp/Gas Proof membrane/tanking/draining	Loadbearing capacity: Basement	Foil wrapped rigid board	Aluminium (33% recycled)	
30 Dormer Flat Roofs (DFR)	Conduction Thermal insulation	Loadbearing capacity: Domed Roof	Foil wrapped rigid packed beads vacuum sealed	Aluminium (recycled)	
31 Dormer Side Wall (DSW)	Loadbearing structure	Loadbearing capacity: Flat roof	Gluiam	Aluminium (virgin)	
32 Dormer Window Wall (DWW)	Acoustic Isolation/Sprung/services zone	Loadbearing capacity: Floors	Granules	Aluminium / timber frame double casement 1200 x 1200 2x glazed, air or argon filled	
33 Other Geometry Roof (OGR)	Acoustic/thermal convection/flanking Insulation	Loadbearing capacity: Foundation	Hollow Block	Aluminium / timber frame double casement 1200 x 1200 2x glazed, krypton filed	
Internal Ceilings (IC)	Levelling/wearing layer	Loadbearing capacity: Frame	Hollow section	Aluminium / timber frame double casement 1200 x 1200 2x glazed, xeon filed	
34 Flat Ceiling (FC)	Finish/wearing	Loadbearing capacity: Partitions	Hollow section	Aluminium clad timber frame 1200 x 1200 2x glazed, air or argon filled	
35 Pitched Vault Ceiling (PVC)	Decoration	Loadbearing capacity: Pavement	Injected Foam	Aluminium clad timber frame 1200 x 1200 2x glazed, krypton filed	
36 Barrel Vault Ceiling (BVC)		Loadbearing capacity: Pitched Roof	Insitu	Aluminium clad timber frame 1200 x 1200 2x glazed, xeon filed	
37 Domed Vault Ceiling (DVC)	**Components Frame**	Loadbearing capacity: Swimming pool basin	Insitu cast	Aluminium clad timber, 2x glazed, argon filled, window	
38 Hipped/Pyramid Vault Ceiling (HPVC)	Columns/Compression posts	Loadbearing capacity: Walls	Insitu-Soil & Straw Reinforced	Aluminium Cladding	
39 Mono-Pitch Vault Ceiling (MPVC)	Bracing/Ties/anchors	Moisture Vapour permeability	Internal plaster	Aluminium foil	
40 Mansard Vault Ceiling (MVC)	Beams	Moisture Vapour resistance	Internal render	Aluminium foil vapour check	
41 Other Geometry Ceiling (OGC)	Diagonal bracing/sheer plane	Movement	Joints	Aluminium frame 1200 x 1200 2x glazed, air or argon filled	
Glazing Windows Rooflights/vents and Doors (G)	Trusses	Packaging	Layer	Aluminium frame 1200 x 1200 2x glazed, krypton filled	
42 Windows (W)	Transfer slabs	Passage	Levelling Screed	Aluminium frame 1200 x 1200 2x glazed, xeon filled	
43 Glazed Pedestrian Doors (GPD)	Lateral restraint straps	Privicy	Lining	Aluminium general	
44 Opaque Pedestrian Doors (OPD)	Node connectors/post ends	Racking strength	Loose	Aluminium vapour control layer	
45 Large Wall Opening (LWO)		Rainwater drainage	Loose Aggregate	Aluminium, 1 mm	
46 High Usage Entrance Door (HUED)	**Components Walls/Partitions**	Rainwater harvesting	Loose Granuals	Asbestos fibre (yes its used in eastern Europe)	
47 Display Window (DW)	Decoration: Paints stains oils lacquers waxes	Rainwater permeability	Loose gravel	Asphalt	
48 Glazed External Walls (GEW)	Outer rainscreen cladding	Rainwater Permeability/drainage/harvesting	Masonry wall/leaf	Asphalt paving	
49 Opaque External Walls (OEW)	Weatherboarding	Rainwater resistance	Mat	Asphalt, 8% binder, 10 mm	
50 Glazed Roof (GR)	Malleable metal cladding	Rainwater resistance/drainage	Multi-layer membrane	Autoclaved Aerated Concrete	
51 Rooflights (RL)	Tiles/slates/shingles/shakes	Renewable Energy Equipment	Multifoil	Autoclaved Aerated Concrete	
52 Roof Windows (RW)	Profiled metal cladding	Renewable Heat Equipment	Pane	Autoclaved Aerated Concrete block	
53 Roof Air & Smoke Vents (RASV)	Pressed metal cladding	Restraint	Panel	Autoclaved Aerated Concrete Slab	
Basement External Entrance Well (BEEW)	Framing/carrier systems	Security	Patrass	Bamboo	
54 Basement External Entrance Well Retaining Pavement (BEEWRP)	Battens/counter battens	Servicing	Pipes	Bio based plastic foam	
55 Basement External Entrance Well Retaining Wall (BEEWRW)	Cavity	Servicing	Plaster coat	Bird Feather	
56 Basement External Entrance Well Staircase (BEEWS)	Cavity barriers	Shealhing	Plaster Render	Bitumen	
57 Basement External Entrance Well Party wall (BEEWPW)	Breather membrane/wind tightness layer	Sheer Resistance	Quilt	Bitumen Aluminium layer

Green Building Calculator

https://GreenBuildingCalculator.uk

V1 Supplier Request Form:

- Will be available to download
- Used to request information on products from manufacturers or suppliers
- Collect intelligence about applications
- Collect product property datasets

V2 Manufacturer Supplier Intelligent Products Data Collection

- Some refinements to capture all necessary for:
- Drop Down Lists to control inputs from look up tables
  - Competent Application (e.g. certified)
  - Manufacturer's intention only (not architects inventions?)
- EE, EC, SC datasets if they have them
  - And more from LCA & EPD
- Screening Client/Designer Priorities
- Costs:
  - Manufacture: at factory gate
  - Supplier: to site
  - Approved Installers: installed rate
  - Not best price with discounts
  - But realistic price to avoid substitutions later

V2 Manufacturer Supplier Intelligent Product Data Collection

	Manufacturer Supplier Request:		Manufacturer Product Reference	NB This Schedule can be downloaded directly from the Green Building Calculator website Https://GreenBuildingCalculator.uk			© GBE Green Building Calculator 2017-2021				Size		Insulation		Overheating		Size			Condensation Check		Bill of Costs

V2 Letter to Manufactures & Suppliers: Product Data Request

Manufacturer Supplier Letter

Dear Suppliers, Manufacturers and DataSet Providers

I hope you will have already attended a Zoom meeting to address this GBC Product Data Collection task.
If not GBC have recorded the meeting and posted it here: Https://GreenBuildingCalculator.uk/ _____

GBC are aware that there are many U value calculators out there but most are by individual manufacturers and inevitably they are designed to sell more of their own stuff.
In the absence of comprehensive data for a diverse range of products out there these calculators help to maintain business as usual

GBC originally created a calculator for RIBA Part 2 Architectural students who would be out there choosing and specifying materials in a year or two.
It turned out that all the part-time students took it to their office and used it on real live projects.
During Covid Lockdown BrianSpecMan developed a multi-functional version of the calculator to engage robustly with Climate Emergency and provide a tool for all building designers to join in.
There is a lot to be said for putting product information in front of students, Metza have put loads of samples into Uni workshops to great effect.
So GBC want this calculator to be as comprehensive as possible populated with real building products and materials with a full set of product data.
GBC is now updated and expanded for professional use and is available online: Version 1.0.0. already addresses:

- New Build
- Whole building areas and volumes
- Elemental areas and component volumes
- Form Factors (to help guide the U value targets)
- Regulations and Design Standards to choose Targets R and U values
- Elemental Assemblies (to address thermal bridges and work out R or U values and engage the many other parts of the calculator)
- Components parts: (with function, material choice and thicknesses)
- Materials datasets with an emphasis on Bio-based construction (part of the Climate Emergeny solution)
- Room by Room Heating demands (for radiator and UFH manifold sizing)
- Energy Source Sizing (or isulating to match energy source)
- Whole building energy demands
- Elemental breakdowns
- Element area % v element heat loss % (allows real value engineering VE dicsussions with the client)
- Fuel choice carbon factors
- Carbon In use (part of the Climate Emergeny discussion)
- Compare cost and performance of insulation and windows (real VE)
- And other features

It is being updated now to Version 2 addressing:

- Updates to many of Version 1 worksheets
- Retrofit Specifics developed (for one off or community scale projects, historic fabric features added)
- Bill of materials, Accessories, Quantities, Labour, Costs (For Cost planning, price gathering and tendering)
- Embodied energy and carbon (Engaging with Climate Emergency)
- Sequestered carbon (Emphasising Bio-based construction advantages)
- Life Cycle Assessment (LCA) (Engaging with Climate Emergency)
- Fuel choice costs
- Cost in use (adding to the VE discussions)

It is being updated Version 3 to 20 over the next 2 years with more datasets and more functionality addressing:

- Competent Construction (Post-Grenfell avoiding permitting products being used incorrectly)
- Condensation Check (Avoiding incompetent)
- Decrement delay calculation (Avoiding overheating)
- Readymade Elemental Assemblies, Manufacturer's Competent solutions and Bespoke Elemental Assemblies (892 readymade, manufacturers and users contrubuting their own)
- Waste Cost and Embodied Carbon calculator (to encourage waste segregation and cost savings)
- Plastics content and plastics avoidance (removing fire hazards and reducing opportunities for microplastics at large)
- Recycled Content Products
- Circular economy, (Reclaim and Reuse, Recovery, Recycling)
- Multi-purpose Multi-functionality and Value Engineering
- Green Building Price Book (20 years after it was suggested)
- BIM App (to speed up the population of the excel cells and creating BIM Models from calculator)
- And much more

GBC will continue to develop the calculator after this current update if you are unable to respond to this request immediately, your information will always be welcome for later additions
GBC has put GBC Green Building Calculator V1 into the public domain for general consumption. V2 is to follow shortly.
Posts about GBC Calculator can be found on GBE website at https://GreenBuildingEncyclopaedia.uk/?p=38491
it can also be found at https://GreenBuildingCalculator.uk
GBC has attached an excel spreadsheet for you to populate with your information
If your products do not fit into this spreadsheet, sorry to have bothered you this time.
If your products do fit please complete this as soon as possible, this week would be nice, within 3 weeks to make the next Version release, later still will still be useful.
If you cannot help immediately but will later, do let GBC know.
If your product needs more columns please add them to the right of the existing or add notes in the comment column.

Your help in this matter will be much appreciated and acknowledged and we hope it will generate more real enquiries for your products
Good luck with filling in the table
We have added a legend towards the bottom of worksheets to explain the meaning of the cell colours
GBC has also drop down lists to prompt you with the potential information to add and to maintain a degree of consistency, avoid typos and engage other calculator functions
Thank you for your time and patience.
If you need help do not hesitate to call me

Regards

User Survey

Please email the survey as a PDF or excel to BrianSpecMan@icloud.com

GBE thinks it knows what is needed and the right order for its development
Some tasks are dependent on others being in place first to build upon
GBE would like to know from users if they would like to see some parts developed sooner
GBE would like to know from users if they would like to see other parts added to the tasks
Please rearrange the numbers in columns E & F into your preferred order and add any comments or requests in column G
Please complete 'Your Requests' below

			Please arrange the numbers in your preferred order		
			Preferred Version Order	Preferred sub-item order	Comment
About	A description of what GBE Green Building Calculator is, how it started and how it has developed	Launch Version 1.1	1	1	
Features Benefits	What is does and how that helps users	Launch Version 1.2		2	
Development	Aid memoir for development	Launch Version 1.3		3	
Phased Development Prices	This page: What is included in the launch version of GBE Green Building Calculator and GBE's suggested development order: Subject to user survey	Launch Version 1.4		4	
Instructions	Read these if GBE Green Building Calculator is not intuitive (it probably won't be if you have not done a U value calculation before)	Launch Version 1.5		5	
Revisions	A record of updates to GBE Green Building Calculator to enable an audit trail through the development process	Launch Version 1.6		6

Schedule of Accommodation	Schedule of Accommodation Room by Rooms Input page: more specific than whole building if required; Areas and volumes, hours of operation, design temperatures, inside and out	Launch Version 1.9		9	
Room By Room Heat Losses	Input and Put-put page: Room by room heat loss calculator to determine Boiler size, radiator or under floor heating requirements, Developed to help designer to make the insulation thicknesses or window specifications to match a boiler capacity when it's a tight fit	Launch Version 1.10		10	
Form Factor	Results page: Analysis of Form Factor and optimal U values to respond to them To help designers see the importance of compactness, or the consequence of fragmentation of the building volume, on the energy consumption See Update 2.3	Launch Version 1.11		11	
Building Elements	Input page: simple yes/no Building Elements and secondary-elements are selected from readymade lists of 29 Elements and 12 Secondary Elements to match the scope of the project	Launch Version 1.12		12	
Building Element Areas	Input and output page: Building Elements and secondary-elements: their dimensions are added by user and their areas are automatically calculated.	Launch Version 1.13		13	
Multiple Size Building Element Areas	Input and output page: Since windows and doors come in a multitude of sized then a GBE Green Building Calculator schedules allows you to incorporate them all	Launch Version 1.14		14	
U values Etc. Energy Targets	Results page: Allows the users to compare and choose between Building Regulations Part L, other national regulations or standards, LETI, AECB CarbonLite, Passivhaus, EnerPHit, EAMs, etc. including: U values, Airtightness, Form factors, Elevational window %.	Launch Version 1.15		15	
Insulation Thicknesses	Input and output table: Information Resource: Quick look up table Users apply the chosen U value targets from the previous worksheet GBE Green Building Calculator automatically displays the thickness of different k valued insulation materials needed to meet U values targeted in each element.	Launch Version 1.16		16	
Decrement Delay Insulation Thickness	Input and output page: (incomplete at launch) Automatically see what thickness of different k valued insulation materials is needed to avoid overheating on summer See Update 2.1	Launch Version 1.17 Version 3.1		3.1	
Legend	Information Resource: A list of terms used in GBE Green Building Calculator with some explanation of their meaning in a tabulated format Potential link to GBE Jargon Buster pages	Launch Version 1.18		18	
Elements	Input and output page: Yes/No then choose from drop down menu, followed by automatic cell population Allows the user to populate and assemble elements by choosing their combination of functional components and then choosing the materials for each component. Components are in the right sequence but it may needs some know-how to choose the right one (Update 3 will help with readymade assemblies) Costs of insulation and windows are added here to help persuade architects and clients to spend money on insulation and higher performance windows and glazing.	Launch Version 1.19		19	
Bill of Materials Quantities Costs	Input and output page: Allows user to cost plan their Building with a Bill of materials, quantities, labour and costs based on building fabric only so far. It will be reliant upon users interrogating recent tender rates or building price books Services are planned to be addressed in update 1.4-1.7 (unless users say otherwise) Non-external envelope components are planned to be developed in Phase 5.4 (unless users want it sooner) See Update 1.2 & 1.3	Launch Version 1.20		20

V2-V33 Planned Development

Priorities to bring forward:

- V2 Retrofit, Terraces, Community level, MEP Services,
- V3 Decrement Delay, Form Factor refinements: dormers, bays, porches
- V4 Building Section Coding, Competent Application,
- 892 ready made elements, Bespoke Assemblies, Accessories, Specification Generator
- V5 Non-Domestic, Retrofit and Newbuild more refinement
- V6 Embodied Energy, Carbon and Sequestered carbon; Non-external envelope elements
- V7 Condensation Check, Thermal Bridge, Secondary Element Calculator, Thermal mass calculator
- V8 LCA Calculator
- V9 Landscape
- V10 Civils and Infrastructure: scope Increased
- V11 Waste Calculator using WasteCost®Lite
- V12 Plastic free v Recycled Plastic
- V13 Interiors: Scope increased, Ska fit-out. refit
- V14 Circular economy: Reclaim Reuse
- V15 Self-build Interface
- V16 CAD BIM App
- V17 Whole Project Budget Calculations, full Fee bid calculation based on cost plan
- V18 EU and International versions
- V19 Services Design Module: Occupancy level, Energy Sources and uses,
- V20 Lighting Design Module: Health & Wellbeing, Light Nutrition
- V21 Biodiversity Inclusion, Biodiversity Net Gain
- V22 Local Climate Appropriate construction and materials
- V23 Vernacular, local: materials, trades, economy
- V24 GBPB Green Building Price Book
- V25 O&MM Operation & Maintenance Manuals
- V26 FM Specification
- V27 Local Procurement, Transport to site, distance search facility
- V28 On Site Construction Emissions
- V29 Design Life, Durability and Competent Products
- V30 Air tightness & Energy Loss
- V31 Value Engineering Opportunities: in not out
- V32 Healthy Building
- V33 Screening Priorities

B Bespoke

- B1 Retrofit Window & Insulation Calculator
- B2 Screeds Calculator
- B3 Window Calculator

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Version 2 initial proposal

- Carbon in use/annum
  - Hours of use per day
  - Days/week days/year
- Domestic Retrofit:
  - One off and community
- Bill of materials; add
  - Building Labour Rates
  - Materials Rates
  - Services Scope and quantities
  - Services Rates
  - Services Labour Rates
  - Services Costs

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Version 2 Actual (@1Year)

- Domestic Retrofit: development one off and community scale
- Bill of Materials, Quantities, Labour, Materials, Accessories, Costs; development: Building and Services
- Form Factor Calculator development (V2)
  - Insulation thicknesses for materials
- Decrement Delay Calculator: (V2?)
- EE EC SC Calculator: (V2)
- ICE database 1.3 > 3 (V2?)
- Non-External Envelope Components (Foundations, Frame, Stairs, Partitions, Furniture, Interiors, Landscape)
- Services: systems of kit, appliances cables, pipes, ducts, conduits, accessories, insulation,
- Guidance on how to populate the Bill of Rates (BoR) Bill of Costs (BoC) (Tender document?)

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Versions 3 Initial proposal

- Decrement Delay Calculator
  - to avoid summer overheating
- Condensation check:
  - static to BS 5250
- GBE Product Datasets
- GBE Form Factor Calculator
  - Other Method
  - Different materials & Thicknesses

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Versions 3 Adjustments

- Decrement Delay Calculator (in version 2?)
  - to avoid summer overheating
- Condensation check: (in version 2?)
  - static to BS 5250
- GBE Form Factor Calculator (in version 2)
  - Other Methods (AECB?)
  - Thicknesses of insulation to meet U values (V2)
  - Different materials thicknesses to meet U values (V2)
- GBC Product Datasets
- GBC Materials Datasets
- GBC Product Specifications
- GBE Product Pages (later if GBC sales are good)

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Version 4 initial proposal

- Building Section Coding
  - Elements, Sub-elements and Junctions
- Material Appropriateness to Application
- Building Elemental Assembly Code Numbers
  - Outer face-Core-Inner face
  - CAWS-CI/SfB-CAWS-Instance
  - To Passivhaus U values
  - 892 Readymade Competent Elemental Assemblies
  - Bespoke invite collection and incorporation
- Specification Generator

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Version 4 Adjusted

- GBE 2D View
- Building Section Coding
  - Elements, Sub-elements and Junctions
  - Not component level (could be a different coding too)
- Material Appropriateness to Application
  - Existing matrix to incorporate
- Building Elemental Assembly Code Numbers
  - Outer face/Core/Inner face
  - CAWS-CI/SfB-CAWS-Instance (Uniclass is impractical)
  - To Passivhaus U values
  - 892 Readymade Competent Elemental Assemblies
  - Bespoke incorporated (flagged in version 2)
- Feedback loop
  - Invite Users Bespoke datasets to add to Look up tables
- Specification Generator
- Feedback on CO2 savings from users to GBC (EBD awards)

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Version 5 Initial proposal

- More specific interfaces:
  - Non-Domestic Retrofit:
  - Domestic new build
  - Non-Domestic New build

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Version 5 Adjustments

- One interface: more options
  - Domestic new build
    - (it started here)
  - Non-Domestic Retrofit:
  - Non-Domestic New build
    - Version 2: More elements added: Frames, Foundations, Cubicles, IPS, etc.
- Add grouped ‘switch off elements’

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Versions 6 Initial proposal

- GBE EE EC SC Calculator
  - ICE database: 1.3 > 3.0
  - Will provide Embodied Energy, Embodied Carbon and Sequestered Carbon data
- Bill of Materials Quantities Costs
  - Non-External Envelope Components
  - Landscape Assemblies

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Versions 6 Adjustments

- GBE EE EC SC Calculator
  - added to Version 2
  - ICE database: 1.3 > 3.0
  - Will provide Embodied Energy, Embodied Carbon and Sequestered Biogenic Carbon data
- Bill of Materials Quantities Costs
  - Started Adding to Version 2
  - Non-External Envelope Elements & Components
  - Sub and super-structure Elements & Components
  - Landscape Assemblies
  - Services Systems

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Version 7 initial proposal

- Condensation Check
- Thermal Bridge Calculator
- Secondary Element Calculator
  - Glazing and framing specifications
  - Ug Uf & Uw and Psi perimeter and spacers

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Version 7 adjustment

- Condensation Check in V2
- Thermal Bridge Calculator
- Secondary Element Calculator (in version 1)
  - Glazing and framing specifications
  - Ug Uf & Uw and Psi perimeter and spacers
  - More Product datasets

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Version 14

- Circular Economy
  - Reclaim & reuse
  - Reclaimable & Reusable
  - Value
- Paola Sassi Research:
  - Reclaim-ability, reusability & value scores
- BAMP
  - >400 products with Product Passports
- FCRBE futuREuse projects

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Version 15

- Self-build Interface
  - Town & Country Planning
  - Wales Technical Advisory Note 6
  - One Planet Development
  - Zero Carbon evidence requested
- More graphic user interface to explain construction
- Links to GBE website:
  - Jargon Buster, Checklist, 2D View

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Version 16 Initial Proposal

- BIM Building Information Management
- CAD Computer aided Design
- BIM App to interrogate Building Model and extracting physical and dimensional information
- BIM interrogate BOM to feed the calculator

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Version 16 Adjustments

- CAD BIM App
  - Make it interrogate BoM Bill of Materials
  - Interrogate physical and dimensional information
  - Create a template with all dimensions for all cells
- 2 direction application?
  - Import <> Export datasets
  - Feedback an elemental assembly that can be cad'd up as a Library object and deployed into model
  - 892 Elemental assemblies CAD BIM Models
  - x000 Materials and Products as Component Objects

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Version 17 Addition

- Whole Project Budget calculations
- Fees
- Overheads
- Profits
- Preliminaries

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

Version 18 Addition

- EU and International versions
  - Regional Product datasets?
  - Money conversion
    - £ to Euros and other currencies as requested
    - build in a converter to all totals cells?
    - Choose currency, update exchange rates
  - Imperial measurements
    - Unlikely for UK
      - I hope Brexit goes no further
    - US audience have requested it
      - Engage somebody to develop it

V19 Services Design Module: Energy Sources,

- Matching demand to source capacity
- Optimising technology mix
- Design Tool
- Specification Tool

V20 Lighting Design Module: Health & Wellbeing

- Matching light nutrition to user demands
- Optimising technology mix
- Design Tool
- Specification Tool

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

V21 Biodiversity Inclusion

- Mismatch of animal to roost sizes
- Mismatch of roost sizes to build sizes
- Products datasets
- Specification Tool

GBE

https://GreenBuildingEncyclopaedia.uk

GBC

Green Building Calculator

https://GreenBuildingCalculator.uk

V22 Local Climate Appropriate

- Guidance on appropriate materials
- Emphasis on Local made materials
- Interact with V23 & V27

V23 Vernacular, local: materials, trades, economy

- Goods Transport calculator
- Labour Travel calculator
- Addition to Impacts calculator
- Localise Regionalise Product Datasets

V24 Green Building Price Book (GBPB)

- Price data added to Product Datasets
- Embed into BoM BoP
  - Drop Down Lists
  - Look Up Tables

V25 O&MM Operation & Maintenance Manuals

- More datasets
- O&MM Specification Tool

V26 Facilities Management

- FM Interface
- Segregation, Storage, Reclaim and Reuse
- More Product datasets
- FM Specification

V27 Local Procurement,

- Transport to site,
- distance search facility

V28 On Site Construction Emissions

- Based on RICS guidance
- Bring forwards to V3?

V29 Design Life and Durability and Competence

- Based on Component Life manuals
- HAPM, Spons, etc.
- BSI Kitemarked Products
- BBA Certified Products
  - (Not UKCA marked)
- ETA Certified (If BCO permit)
  - (Not CE marked)

V30 Air tightness & Energy Loss

- **Set targets:** (bring forwards to V3?)
  - Regulations: E&W, S NI, RI, others
  - Design Standards: Passivhaus, AECB CL
  - Campaigns: LETI,
- Air leakage rates
- Energy loss

V31 Value Engineering Opportunities

- Synergistic combinations
- Cost v value
- Whole system v individual
- Pay-back periods v Carbon-back periods

V32 Healthy Building

- Healthy materials
- low-chemistry, low-irritant, healthy solutions
- Learn about their positive properties and help promote their competent application
- Including planet-friendly and human-healthy materials and products to make, install, use, maintain, deconstruct, reuse and recycle
- Address indoor air quality, reduce indoor pollution

Green Building Calculator

https://GreenBuildingCalculator.uk

V33 Screening Priorities

- Consider screening to match client/designer priorities
- Consider which issues are to be addresses and how robustly
- Screening options:
  - healthy, carbon, water, waste minimisation, circular economy: recycled content, reclaimed for reuse; plastic-avoidance, bio-based, durability, product quality, self-build, etc.
- Use IPDC collecting additions data points to enable screening appropriate materials and product

GBC Green Building Calculator

https://GreenBuildingCalculator.uk

V2-V33 Planned Development

Priorities to bring forward:

- V2 Retrofit, Terraces, Community level, MEP Services,
- V3 Decrement Delay, Form Factor refinements: dormers, bays, porches
- V4 Building Section Coding, Competent Application,
- 892 ready made elements, Bespoke Assemblies, Accessories, Specification Generator
- V5 Non-Domestic, Retrofit and Newbuild more refinement
- V6 Embodied Energy, Carbon and Sequestered carbon; Non-external envelope elements
- V7 Condensation Check, Thermal Bridge, Secondary Element Calculator, Thermal mass calculator
- V8 LCA Calculator
- V9 Landscape
- V10 Civils and Infrastructure: scope Increased
- V11 Waste Calculator using WasteCost®Lite
- V12 Plastic free v Recycled Plastic
- V13 Interiors: Scope increased, Ska fit-out. refit
- V14 Circular economy: Reclaim Reuse
- V15 Self-build Interface
- V16 CAD BIM App
- V17 Whole Project Budget Calculations, full Fee bid calculation based on cost plan
- V18 EU and International versions
- V19 Services Design Module: Occupancy level, Energy Sources and uses,
- V20 Lighting Design Module: Health & Wellbeing, Light Nutrition
- V21 Biodiversity Inclusion, Biodiversity Net Gain
- V22 Local Climate Appropriate construction and materials
- V23 Vernacular, local: materials, trades, economy
- V24 GBPB Green Building Price Book
- V25 O&MM Operation & Maintenance Manuals
- V26 FM Specification
- V27 Local Procurement, Transport to site, distance search facility
- V28 On Site Construction Emissions
- V29 Design Life, Durability and Competent Products
- V30 Air tightness & Energy Loss
- V31 Value Engineering Opportunities: in not out
- V32 Healthy Building
- V33 Screening Priorities

B Bespoke

- B1 Retrofit Window & Insulation Calculator
- B2 Screeds Calculator
- B3 Window Calculator
